

## **Integrated Dynamics Engineering (IDE) Opens New Facility For Vibration Isolation, EMI Cancellation, and Automation**

Integrated Dynamics Engineering (IDE) is now fully operational in a new seven-million dollar headquarters, research, and manufacturing complex in Raunheim, Germany, a short distance from Frankfurt International Airport.

The new, multi-use IDE campus combines historic early 20th Century buildings with state-of-the-art modern structures. Together, they incorporate more than 52,000 square feet of green-friendly space. Among its advanced features are large state-of-the-art clean rooms, environmentally designed executive and management offices, Wi-Fi conference rooms, and, in progress, a sleek, minimalist showroom highlighting IDE's newest precision isolation and material handling systems.

For customer and employee convenience, the IDE complex is directly on a major suburban rail line, with easy access the autobahn.

Growing steadily over more than two decades, IDE is now the world leader in environmental controls and material handling for semiconductor manufacturers, prestigious universities and groundbreaking research laboratories. Virtually all IDE solutions are customized by IDE to meet unique client requirements.

"Our technical reputation and business have expanded tremendously," commented Thomas Breser, IDE Global Managing Director, "and now was the right time for our physical plant to reflect our growth and increased services to our leading edge customers around the world."

Breser continued, "In addition to an innovative, state-of-the art working environment for our employees, it provides greater convenience and efficiencies for all. It is a well-planned, well-funded investment for the future."

The IDE Group, incorporating IDE GmbH in Germany; IDE Inc. in the United States; and IDE Ltd. in Japan, is a major unit of Aalberts Industries, which was founded in 1975, and is based in Langbroek, The Netherlands. Today, Aalberts Industries is the world leader in high precision industrial components, with over 150 companies and more than 12,000 employees worldwide.
